

Excellence Awards

EPA Senior Adviser Peter Scott has picked up two 'Excellence Awards' for water sensitive urban design.

The awards are from Engineers Australia and the Stormwater Industry Association.

Peter was a principle contributor to the book, *Water Sensitive Urban Design: Source Control—Handbook for Australian Practice*.

Released by UniSA, the aim of the book is to improve the way stormwater is managed in urban communities.

By changing the focus of stormwater management, the book suggests that urban communities can not only achieve efficiency in water management, but also reduce flood risk, achieve healthier riverine and marine waterways and improve amenity.

Peter's expertise include detention and retention of stormwater runoff, continuous simulation modelling and aspects of stormwater quality.
