

Turning Green into Gold! – Eco-mapping: How to save \$\$\$\$

Produce more goods and services with less resources and less waste

Presentation

Date: TBA

Time: TBA

Venue: EPA 250 Victoria Sq Adelaide
(SA Water House) Rm 9.1

Cost: Your valuable time

Benefit: Being able to work out your organisation's environmental footprint and impacts

***Outcome:** Your Environment Action Plan gets started*

Are you considering how to reduce water, energy and waste costs or do you need an Environmental Management System (EMS) – but don't know where to start?

This introductory session will help you get started using a very simple set of hand-drawn maps called 'Eco-maps'.

The freeware system was created by Heinz–Werner Engel in Europe and is creating significant interest here in SA. This is due to its simplicity, flexibility and staff involvement. While the Ecomapping process can incorporate OHS&W and risk management, it can be expanded into a more sophisticated EMS to meet ISO 14001 if you need it.

You will gain practical experience in Ecomapping, allowing an understanding of how to create your own Environment Action Plan as a basis for an EMS. This can be used as proof of environmental due diligence.

Do you want a DIY action plan to improve efficiency and decrease environmental risk?

Environmental Management Systems

EMS made easy
