17 January 2013

Dear Resident,

Indoor Air Sampling - Clovelly Park

As you are probably aware from previous communication from Monroe Australia a program of indoor air sampling and soil vapour testing has been undertaken at selected properties in Clovelly Park during the December period last year.

We wish to advise that in this sampling round, that no PCE, DCE or VC was detected in any of the homes. We note however, that concentrations of TCE (trichloroethylene) were detected, just above the U.S. EPA Reference Concentration of $2 \mu\text{g}/\text{m}^3$ (micro grams per cubic metre) in three of the homes tested. There is no immediate or significant health risk to the families living in these homes, however, follow up testing of the indoor air of the residential properties will commence on Friday 1 February to confirm the results.

Monroe wishes to continue its ongoing work and agreed with the EPA accredited site contamination auditor, the EPA, the Department for Health and Ageing to conduct soil vapour sampling in the extended area of investigation. Monroe requests for our consultants to visit your home during next week, commencing work on Monday 21 January to take soil vapour samples from the front and rear yard of your property. Monroe will review these results with an independent site contamination auditor, the EPA and the Department for Health and Ageing and expect the results will be available to be communicated to you by early March.

If you would like more information you can contact me at Monroe Australia on 8374 5222.

In addition, I have attached frequently asked questions that have been prepared by the EPA and the Department for Health and Ageing for your review. If you have any further questions you can also contact the EPA hotline on 1800 729 175 between 8am and 8pm on weekdays or visit the EPA website at www.epa.sa.gov.au or the Department for Health and Ageing on 08 8226 7100.

I thank you for your understanding and patience in this matter.

Yours sincerely

Pat Larobina
Plant Manager
